

Psychology

What makes me attracted to my crush?
Why do I care so much about what other people think?
How do stereotypes influence behavior, perception, & social interactions?
Why did doctors cut patients' brains to treat mental illness?
What are the symptoms of depression and anxiety?

If these questions interest you then you should take psychology!

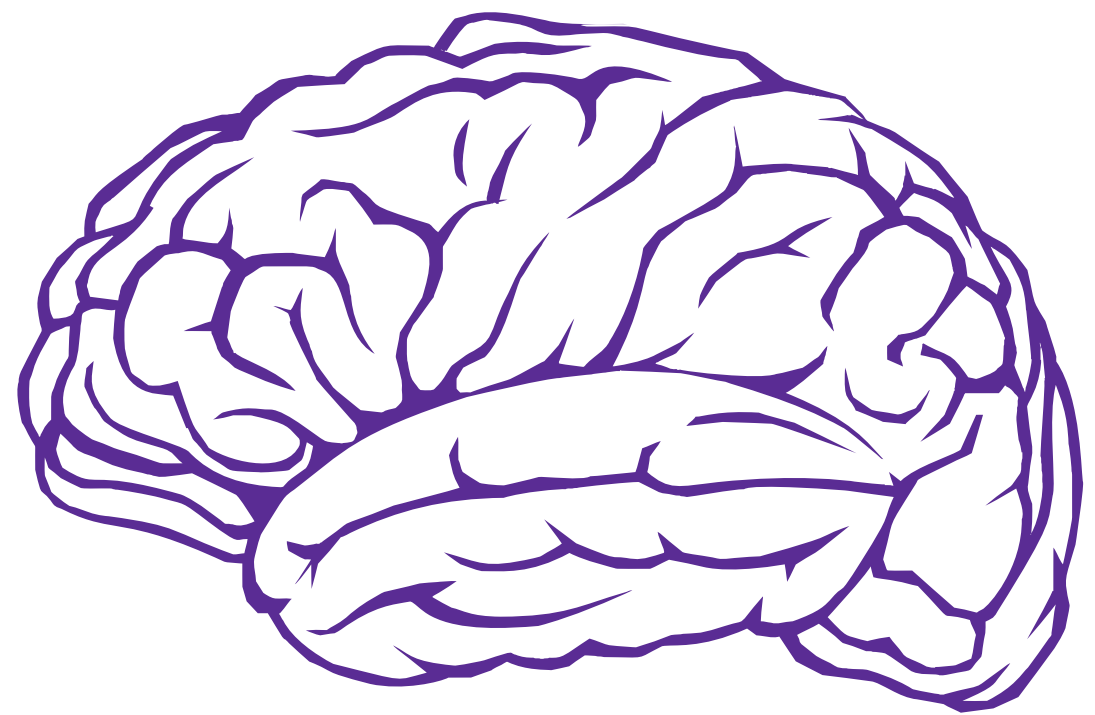

What topics are taught?

Defining and treating mental illness
Social pressure and the human responses
How psychology research is performed
How humans and animals learn
Human development across their lifespan
Personality formation
And more!

Why should I take this class?

This class focuses on understanding why humans are the way that they are. Studying psychology will enrich your understanding of the human mind and behavior, provide opportunities for personal and professional development, and empower you to positively impact individuals and society in a purposeful way.
